

Bitrix Environment for Linux (RPM)

Installation Instructions

Install sequence:

```
# wget http://repos.lc-bitrix.ru/yum/bitrix-env.sh
# chmod +x bitrix-env.sh
# ./bitrix-env.sh
```

Before or after installation, the Bitrix product must be allowed access to the following TCP ports in order to function properly:

```
80      http
443     https
5222    bitrix xmpp server
5223    bitrix xmpp ssl server
25      bitrix smtp server
8890    ntlm authentication
8891    ntlm authentication via ssl
8893    pull server (http)
8894    pull server (https)
```

Likewise, if you intend to use Bitrix SMTP, you will need to turn off sendmail or other SMTP services installed by default.

```
# service sendmail stop
# chkconfig sendmail off
```
